Logo Mock-Up / Paper Edition

Pune Design

- **2 PSD** Files / Fully Layered
- Minimum: Photoshop **CS3**, Resolution: **2300x1472px**

  Easy to edit and customize. Layers are well-organized.

- Usage is very simple. Open the psd file, you will find a group of layers (duly named) and within these groups are smart objects, double click on smart object (thumbnail) opens a new window, simply insert the desired image into this window, position it, and then click save. You'll see that the first open file changes occurred.
  And then repeat these steps for every smart object.
- Smart objects are named: **#Placeholder.**

- I hope that this will make the job easier.
  Feel free to contact me at anytime, suggestions and requests are always welcomed.
